## RT/800

RouteTrust offers the industry's first technology platform designed by experienced telecom operators. The RouteTrust team has decades of practical experience as both Carrier ID Code (CIC) operator and Responsible Organization (RespOrg) manager. The RT/800 platform is designed to simplify toll-free management through intelligent automation and insightful alerting and reporting. The platform balances the operational demands of voice operations with the commercial needs of every profitable organization. RT/800 will help you minimize the level of effort required to support toll-free and distribute the workload more effectively.

### **Toll-Free Number (TFN) Administration:** *Manage the complete life-cycle of your TFN inventory*

- Dashboard – a proprietary display highlighting areas that require attention
- Bulk Actions – managed up to 100,000 numbers per request, keep major projects organized and simple.
- Porting – access the Somos ROC system through one user experience
- Query – look up numbers for all available information
- Search – look for available numbers using alpha/numeric search with wilds
- Reserve – add new TFNs from the spare pool to your RespOrg ID
- Active – assign new numbers to a routing template
- Re-Route – move TFNs between existing routing templates
- RespOrg Change – release numbers under your control to another RespOrg ID.
- Disconnect - make numbers under your control inactivate and unable to complete calls
- Spare – return at TFN to the national inventory

### **Route Management:** *Manage all toll-free routing with efficient tools and modern technology*

- Easily create and modify templates from scratch or from source data
- Clone routing from one template or number to another with only a few clicks
- Proprietary disaster recovery tools enable fast and easy CIC changes during emergencies.
- Quickly and easily filter through complex template data with multiple filter options
- Identify carrier issues with our proprietary Call Simulator tool
- Bulk replace vendors from any template or number with the Bulk Update tool
- Revert routing to an old routing profile with quick efficiency
- Integrates with switching platforms for single point of provisioning

### **Toll-Free Least Cost Origination (LCO):** *Create the ideal LCO templates for your organization*

- Load your rated carrier CDRs to create a traffic profile
- Load your carrier rates in LATA/OCN, NPA/NXX or flat rate format
- Generate up to 11 template versions of each ubiquitous CIC
- Select the version and default provider that best fits your contract and capacity needs

RouteTrust provides automated access to make real-time changes to the database used by every major carrier in the North American Numbering Plan. With a web-based User Interface that is accessible from any device, highly customizable permissions, and APIs that allow you to integrate functionality into your own customer portal, you can distribute the workload of toll-free management to functional teams or enable your client to do more themselves.
